

PTM-1000

Porcelain, Tile, & Metal Cleaner

PTM-1000 is a phosphoric acid based product used to remove soap scum, rust stains, line and hard water deposits, uric acid stains, mildew, and various discolorations from porcelain, stainless steel, brass, ceramic fixtures, and tile.

DIRECTIONS FOR USE

Simply apply **PTM-1000** to the surface to be cleaned and rinse with water.

TOILET BOWLS AND URINALS: Flush toilet and remove as much water as possible. Apply **PTM-1000** with a bowl mop and allow to remain on surface at least 3 minutes until all rust stains and scale are loosened. To remove odor and incrustations in the trap, pour **PTM-1000** into urinal and allow remaining as long as possible. **PTM-1000** is a concentrate and may be diluted with water, especially if the surface to be cleaned is only slightly soiled. Be sure to rinse all surfaces that have been cleaned with **PTM-1000** to prevent possible streaking. Hard water minerals, scouring powder, and rust stains etch and eat into porcelain and metals so when fixtures are cleaned for the first time with **PTM-1000**, a rough and dull condition may be visible. The product does not cause this; product is harmless when used as directed. Inadvertent spillage on textiles or other materials should be immediately rinsed thoroughly with water to prevent discoloration to the fabric.

TECHNICAL DATA

Color.....	Blue
Scent.....	Sassafras
Foaming.....	High
Solubility in Water.....	Complete
Density (lb/gal).....	8.95
Flash Point.....	None
pH.....	<1.9

PTM-1000

Porcelain, Tile, & Metal Cleaner

FEATURES

Removes Rust

20% Phosphoric acid

Safe

Versatile

CUSTOMER BENEFITS

Saves on inventory

Works the first time

Not a harsh acid; safe to use

Many uses - removes soap scum, hard water, uric acid, and rust
